i ,How are the Hook Lift Truck working?

The ISUZU 4*2 Hook Lift Truck makes use of the special power take off (PTO) to get power from the engine, and then use the power to control hydraulic cylinder. Operate the manual hydraulic cylinder to realize garbage container Loading & Unloading working. Then can be used for garbage collection and transportation.

ii ,What is the main component for truck?

The hook lift truck is refitted based on the ISUZU LHD 4*2 chassis. The refit part includes Garbage carrying assembly, actuator device, hook loader system and operation system.

- Garbage carrying assembly: A carbon steel container, which is used to collect garbage.
- Actuator device: includes power take off, drive line, etc., which can pass the power from the chassis to the hydraulic system.
- Hook loader system: includes hook loader arm, two cylinders & balance valve, which combined working for lifting the container
- Operation system: includes rear Hydraulic Operation Joysticks, which helps come to all special functions' convert.
